Code Test – Pets

Business requirement:

- A json web service has been set up at the url: http://5c92dbfae7b1a00014078e61.mockapi.io/owners

- You need to write some code to consume the json and output a list of all the cats in alphabetical order under a heading of the gender of their owner.

- Example:

        Male

                Angel

                Molly

                Tigger

        Female

                Gizmo

                Jasper

Technical requirements:

1. Project should build on Github or other source control and management. Your check-in and check-out history should be there.
2. Use one of the framework (Angular, ReactJS, Vue).

Delivery:

1. Online source control URL with your buildable project.
2. README document, which includes how to build and use the application.

Please note this test is to show your capability as a SENIOR developer, so not only the outcome but also detail will be evaluated. Good luck!
